Spartan Ext. 3
Kempton Park
Johannesburg

Air travelling throughout a duct is slowed up when it reaches a right angle turn. The "Slow-up" is detrimental to the efficiency of the duct system, therefore air turning vane assemblies are used to guide air evenly around such turns. With today's high labour costs, it is expensive for shops to produce their own air turning assemblies. That's why Airturn rail is a major contribution to sheet metal shops that require efficiency, yet inexpensive air turning vane assemblies.

FAST, LOW COST ASSEMBLY

With Airturn Rail, which is a pre-fab side rail, layout time is eliminated. Vanes can be sheared from scrap metal without tabcutting, and quickly assembled to rails with only one blow of a ball pen-hammer.

CODE	LABEL	QTY
110019	Vane Rail (VR2)	30.5m

Air turn rail made of
0.6 gauge gal.iron

- A - 114
- B - 57
- C - 114
